

Documentation for V.J. Modha Website

Introduction

This document serves as a guide for managing and updating the content of the college's promotional website. It is intended for internal use by the website manager and outlines the steps required to update dynamic content, such as image galleries and other media assets. The website automatically fetches images and other resources from designated folders in the file system, using the file names to generate labels and display information on the site.

To ensure smooth integration and accurate display, please follow the naming conventions and directory structure outlined in the following sections. These sections only include information about dynamic components, not static components. Static HTML components can just be updated in the file as it is easy to do so.

index.php

Index page components like Counter, Pride of College, Events, News, Photos, Testimonials and Academic Pass Rates are placed in “website_dir/components/” dir.

Pride of College

This section displays a dynamic slider showcasing students who have achieved top ranks. Images for this section are automatically loaded from “assets/photos/index/pride_of_college/”.

Each image file must follow a specific naming format to display the correct details:

“CourseName[-Semester[-Language]]__Full_Name__Scope-Rank[_Suffix].jpg”

‘Language is optional’

Eg: “B.Sc.-6-Gujarati__John_Doe__University-1_st.jpg”

From the filename, the following details are extracted and displayed:

- **Full Name:** From the second part, with underscores converted to spaces
- **Course Info:** From the first part, including course name, semester (if present), and language (if present)

- **Rank:** From the third part, including the scope (e.g., University), rank number, and optional suffix (e.g., *st*, *nd*, etc.)

To update this section:

1. Add new images to the specified folder.
2. Name them according to the format above.
3. The site will automatically pick them up and display them in the slider—no code changes needed.

Photo Carousel Section

This section features a horizontal slider that displays general photos on the homepage. Images are automatically fetched from “assets/photos/index/photo_carousel/”

To update this section:

1. Add new image files (in .jpg, .jpeg, .png, or .webp formats) to the folder above.
2. No specific naming format is required for these images.
3. The site will automatically load and display the new images in the carousel.

courses.php

All the data displayed in courses.php comes from courses_data.php. Any changes on the content can be made there. courses_data.php contains associative arrays which can be manipulated for different content.

gallery.php

The Gallery section displays photo albums in a grid layout. Each album appears as a thumbnail (taken from the first image in the album) and opens into a fullscreen slideshow when clicked.

How it works:

- Albums are organized into subfolders inside “assets/photos/gallery/”
- Each subfolder represents a single album.
For example:

`"assets/photos/gallery/annual_day_2024/"`

`"assets/photos/gallery/independence_day/"`

- The folder name is automatically formatted and displayed as the album title (underscores are converted to spaces and capitalized).
- When a user clicks on an album, images from the corresponding folder are loaded dynamically into a modal slider using JavaScript and AJAX.

To add a new album:

1. Create a new folder inside `assets/photos/gallery/`.
2. Name the folder using lowercase letters and underscores (e.g., `sports_event_2025`).
3. Add images (`.jpg`, `.jpeg`, `.png`, `.gif`, or `.webp`) into that folder.
4. The site will automatically display the album with the first image as the cover thumbnail.

If a folder does not contain any supported image formats, it will still appear in the grid but without a thumbnail image.

labs.php

Similar to `courses.php`, `labs.php` has a `labs_data.php`. Every displayed data is fetched from the arrays in `labs_data.php`.

Other Information

As mentioned in the initial document, we will continue to provide minor bug support for the website for a period of two months, from **18 June 2025** to **18 August 2025**.

If you encounter any visual or functional issues, please send a screenshot or screen recording along with the **browser name and version, device, operating system**, and any other relevant information that would help us reproduce and fix the issue.

Please send bug reports to WhatsApp of either Sreyas or Aakash. We aim to acknowledge all valid issues within **3 days**.

Note: This support covers **minor bugs only**, such as layout inconsistencies, display errors, and visual glitches. It does not include content updates, structural changes, or feature additions.

For assistance beyond this period or for additional development work we would be happy to organize a meet and discuss it further.

As discussed in the email, we will upload the website to the FTP by EOD 18 June 2025 and send a zip to the same email as this document.

We confirm that we have received the full payment of **₹25,000 INR** for **Phase 1 of the development**. We acknowledge this payment and, as a result, are sharing this document for your reference.

We sincerely thank you for your patience and cooperation throughout this phase. We look forward to continuing our work with you in the future.

Thank you for your business.

Regards,

Sreyas C.V. & Aakash Kava
